

# U.S.-Denmark Workshop on Renewable Energy July 27th-August 21st 2015

## California And Denmark Are Leading The World In Renewable Energy Solutions

The challenges posed by global climate changes, scarce natural resources, and the volatility of the international energy market require targeted action towards finding technologically, economically and socially viable solutions based on renewable energy sources. The U.S.-Denmark Summer Workshop on Renewable Energy is a unique educational initiative developed by leading universities in Denmark and California.

The four-week workshop takes place annually, in California and Denmark, with the 2015 edition in Denmark. It starts with one week of online preparation and continues with three weeks of lectures, seminars and field trips in Denmark starting on August 3, 2015. Participants will learn about the economics, politics, science, and technology behind renewable energy implementation from leading experts, while exploring communities and relevant energy sites where such technology is in place or currently being implemented. The faculty is composed of U.S. and Danish professors, as well as, external professionals and researchers with proven experience in their field. Students will work on team-based projects related to renewable energy solutions to specific problems. The interdisciplinary approach and holistic perspective allows students with various academic backgrounds to interact and develop concrete final project ideas, while targeting today's energy problems from different angles.

### Open For All Students

The workshop is intended for students of all disciplines, graduate students or senior - undergrads, chosen on the basis of their academic qualifications, creativity, and commitment to RE. Each year, selected students from engineering, business, environmental studies, political science, geography, economics, and other fields are grouped together across disciplines and nationalities to form project-based teams that throughout the workshop investigate the opportunities and challenges facing renewable energy implementation.

**Applications due June 03, 2015**
